Box III TEXT OF THE ABSTRACT (Continuation of Item 5 of the first sheet)

NEW ABSTRACT

An Internet-based, business-to-business web site (figure 1) which aggregates product information from each of a plurality of vendors into a common display format. In response to receiving identification information from an Internet-enabled computing device used by a buyer, the web site displays a list of departments or product categories for which the buyer is authorized to make purchases. Upon receipt of the buyer's selection of a product category or department, the web site displays a list of vendors that have authorized products corresponding to the selected department or category. Upon receipt of the buyer's selection of a vendor, the web site displays that vendor's list of approved products corresponding to the selected department or category. The buyer may place an order for one or more approved products, whereupon the web site receives order parameters, such as the identity of the product and the quantity desired. The web site then forwards the order to the selected vendor for fulfillment, and optionally tracks shipment of the order from the vendor to the buyer.
